

FPS Mobility and Transport invites you to

**Webinar on autonomous ships:
A world of opportunities and exciting challenges.**

22 June 2021 – 13:00 CEST

Dear Madam, Sir,

Autonomous ships provide a sustainable solution for the challenges in maritime transport, decarbonisation, digitalisation, and automation, as well as training, recruitment and retention of highly qualified personnel.

Therefore, a webinar on tackling autonomous ships will take place on Tuesday 22 June, starting at 13:00 CEST (12:00 BST).

This webinar is organized by FPS Mobility and Transport on the initiative of the Belgian Deputy Prime Minister of the North Sea, Vincent Van Quickenborne: "With this webinar, our country once again proves the leading role of the Belgian maritime sector at a global level. With the new legal framework, we now enable pilot projects with autonomous vessels. This will give a boost to the various Belgian companies investing in this technology. We will also be laying the foundations for a regulatory framework on an international level."

You can find the programme here:
